

N·EDGE® PRO

17% NBPT & 23% DCD nitrogen stabilizer.

Guaranteed analysis

N-(n-butyl)-thiophosphoric triamide (NBPT)	17%
Dicyandiamide (DCD)	23%

Application directions

Broadcast, air machine, fertigation, injection/knifed-in

Urea: 2-3 qt/ton

UAN: 1.5-3 pt/ton

Package size | 2 x 2.5 gal | 250 gal | Bulk

Features and benefits

- Contains NPBT to protect nitrogen applied at the soil surface.
- Contains DCD to protect ammonium already in the soil from denitrification and leaching.
- Dual formulation and proven solvent offer enhanced mixing and handling.

N-Edge® Pro is a nitrogen stabilizer that provides both above and below ground protection of nitrogen. It contains NBPT which inhibits the urease enzyme slowing the conversion of urea to ammonia keeping nitrogen protected allowing more time till incorporation by rainfall or tillage. It also contains DCD which holds nitrogen in the ammonium form longer which reduces the chances of denitrification or leaching. By applying above and below ground stabilization in a single formulation, N Edge Pro delivers one of the most effective protectants for nitrogen fertilizers. N Edge Pro also provides superior handling because it dries faster, covers better and produces less dust which all increase flowability. N Edge Pro makes sure the nitrogen you apply is still available for the crop no matter what the weather conditions are.
