

SOYSHOT®

Features and benefits

Ortho-Ortho EDDHA chelated soybean starter fertilizer
0-10-10
0.1% Zinc

- Increased availability of micronutrients.
- Increased availability of phosphorus.
- Maximum crop safety.

Guaranteed analysis

Available Phosphate (P ₂ O ₅)	10%
Soluble Potash (K ₂ O)	10%
Zinc (Zn)	0.1%

0.1% Chelated Zinc

Derived from phosphoric acid, potassium hydroxide, zinc ortho-ortho EDDHA and zinc EDTA.

Soyshot is a starter fertilizer with a low salt index developed for maximum crop safety and performance in soybeans. Soyshot contains ortho-ortho EDDHA which chelates micronutrients in the soil and in the starter fertilizer, improving nutrient availability during the growing season. Enhanced nutrient availability increases early growth, overall plant health and ultimately yield.

Application directions

Soyshot® is formulated for use as an in-furrow starter fertilizer.

- Apply 1-2 gal/A alone or with water

Package size | 250 gal | Bulk
